SUMMARY

GenAI Engineer building production AI systems at enterprise scale. **Built** high-throughput resume processing pipeline (100 resumes/2min), job queue infrastructure (31 job types), and AI service integrations. **Contributed** to multi-vector RAG, multi-agent LLM orchestration, and semantic search platform serving 300+ organizations. 4+ years software engineering with TypeScript, Python, Node.js, React, and PostgreSQL.

SKILLS

Languages: TypeScript, Python, Node.js, JavaScript

GenAI/LLM: OpenAI API, GPT-4, Claude API, Gemini, Embeddings, RAG, Prompt Engineering

AI Infrastructure: PG Boss Queues, Circuit Breakers, Batch Processing, Retry Logic, LLM Orchestration

Databases: PostgreSQL, pgvector, Prisma ORM, Semantic Search

Full Stack: React, Next.js, GraphQL, REST APIs

EXPERIENCE

Fynd (Shopsense Retail Technologies)

Mumbai, India

GenAI Engineer

March 2025 – Present

- Built async resume import pipeline with PG Boss queue for 3-phase processing (Parse, Dedup, Score) with batch AI aggregation (8 resumes per call), circuit breakers on AI/storage services, and fuzzy deduplication with email/phone normalization – processing **100 resumes in under 2 minutes**.
- Designed job queue infrastructure (PG Boss) handling 31 job types with configurable concurrency, retry with exponential backoff, and singleton deduplication powering all async AI operations including screening, watchlist notifications, and message processing.
- Implemented retry logic for transient OpenAI API errors ("Premature close"), LinkedIn job title filter generation (removing locations and company names), and Ideal Candidate Profile (ICP) integration into AI scoring prompts.
- Enhanced text extraction for PDF/DOCX with mailto: hyperlink parsing via JSDOM and legacy .doc to .docx conversion with password detection.
- Contributed to AI platform featuring multi-vector RAG pipeline using OpenAI text-embedding-3-large (3072 dimensions) with 7 semantic vectors (skills, role, domain, seniority, functional, education, full-profile) stored in pgvector for candidate-job matching.
- Worked with multi-agent LLM Council system orchestrating GPT-4, Claude, and Gemini via OpenRouter with 3-stage process: parallel responses, peer ranking, and chairman synthesis for consensus answers.
- Integrated with 9-factor deterministic fit scoring engine, Langfuse for LLM observability, and tool-enabled AI agents using MCP (Model Context Protocol) across the hiring platform serving 300+ enterprise organizations.

Osian Infotech Pvt Ltd

Mumbai, India

Frontend Developer

March 2022 – February 2025

- Migrated 5+ scalable React applications with TypeScript, delivering responsive interfaces optimized for performance across devices.
- Optimized application performance by 20% using React memoization, lazy loading, and code splitting techniques, improving Core Web Vitals scores.
- Implemented Redux and RTK Query for efficient state management and API caching, ensuring consistent data flow across components.
- Developed reusable component library integrated with RESTful APIs and JWT authentication for secure user access.
- Translated designs and wireframes into responsive, high-quality code while collaborating with cross-functional teams.
- Conducted code reviews and analyzed user feedback to optimize UI/UX, improving customer satisfaction by 15%.

PROJECTS

Content Creation FYI | *Next.js, PostgreSQL, Supabase, Prisma, NextAuth, TypeScript*

contentcreation.fyi

- Built full-stack Next.js platform with PostgreSQL on Supabase serving 200+ tools with NextAuth authentication, bookmarking, upvoting, and SSR for SEO optimization.

EDUCATION

Mumbai University

Bachelor of Science in Computer Science (BSc.CS); CGPA: 7.27

Maharashtra, India

July 2019 – March 2022
